Radar-estimated maximum hail (NOAA MRMS MESH, ~1 km grid) at the property and within each distance, and the largest ground report within 5 miles. Dates with 0.75"+ hail at the property or within 1 mi, or 1"+ within 3 mi (radar or a ground report), plus the date of loss.

HAIL SIZE GUIDE

- 0.75" penny
- 0.88" nickel
- 1" quarter
- 1.25" half dollar
- 1.5" ping-pong ball
- 1.75" golf ball
- 2" hen egg
- 2.5" tennis ball
- 2.75" baseball
- 3" tea cup
- 4" grapefruit
- 4.5" softball

NOTES

WEATHER DATA — NOT A DAMAGE ASSESSMENT

Describes weather conditions only. It is not an inspection and does not determine whether property was damaged, the cause of damage, or insurance coverage.

Radar hail sizes (Oct 2020 on) are estimates and can differ from hail on the ground in size and position. Spotter reports cluster near towns and roads, so no report does not mean no storm. NOAA records arrive 3–6 months after an event. A storm day runs 12:00–12:00 UTC (about 7 AM–7 AM Central).

Apr 23, 2022	–	–	–	–	–	59 mph	1 warning	Medium

Strongest wind with a known location within each distance (NWS storm reports, damage surveys, NOAA records). Station: the day's peak airport gust within 10 mi. Warnings: NWS polygons over the property. Dates with 58 mph+ wind within 3 mi or at a station within 10 mi, 50 mph+ within 1 mi, or wind damage or a tornado within 1 mi, plus the date of loss.

WIND (MPH) **39–57** branches · **58+** severe: shingles · **65–85** EF0: gutters, siding · **86–110** EF1: roofs peeled · **111+** EF2+: roofs off

NOTES

WEATHER DATA — NOT A DAMAGE ASSESSMENT

Describes weather conditions only. It is not an inspection and does not determine whether property was damaged, the cause of damage, or insurance coverage.

Wind speeds come from point reports, damage surveys and stations; wind between them is not measured, so wind at the property may have been higher or lower. Spotter reports cluster near towns and roads. NOAA records arrive 3–6 months after an event. A storm day runs 12:00–12:00 UTC (about 7 AM–7 AM Central).

Date-of-loss analysis

Sunday, May 25, 2025

> On the storm day of May 25, 2025, radar estimated 1" hail over the property; the largest hail report within 5 miles was 3" (3.7 mi away); the strongest gust within 5 miles was 30 mph; NWS warnings covered the property (Severe Thunderstorm Warning, Flash Flood Warning).

HAZARDS WITH EVIDENCE
Hail, Flood

CONFIDENCE
High

RADAR HAIL AT THE PROPERTY
1" (quarter)

At and near the property

AREA	RADAR HAIL	LARGEST HAIL REPORT	STRONGEST GUST	TORNADO	OTHER RECORDS
At the property	1"	1.25" at 0.2 mi (1)	–	–	2 warnings · 1 NOAA
Within 1 mi	1.25"	1.5" at 0.8 mi (4)	–	–	4 NOAA
Within 3 mi	1.75"	2" at 1.6 mi (20)	–	–	24 NOAA
Within 5 mi	2.5"	3" at 3.7 mi (26)	30 mph (station)	–	36 NOAA

"At the property": radar over the property, reports within 0.25 mi, and warnings whose polygon covered the property.

Evidence

Hail Radar estimated 1" hail over the parcel; a cocorahs observer measured 1.25" hail 0.2 mi away; the largest report was 3" 3.6 mi away; a warning over the property called for up to 1" hail.
Flood The daily rain analysis estimated 0.22" of rain at the property; a Flash Flood Warning covered the property.

About the data

Radar hail: NOAA MRMS Maximum Estimated Size of Hail, 24-hour max on a ~1 km grid (Oct 2020 on); areas without lightning removed, values capped at 5".

Swaths & confidence: Radar hail contoured by size band; high = ground report, medium = NWS warning, low = radar only.

Reports: NWS Local Storm Reports and CoCoRaHS hail pads.

Warnings: NWS Severe Thunderstorm / Tornado Warning polygons over the property.

Records: NOAA Storm Events (3–6 month lag), NWS damage surveys, FEMA declarations, airport stations.
